

UNIVERSITY OF DENVER

OFFICE OF TEACHING AND LEARNING

Design & Development of Digital Media Projects

The Office of Teaching and Learning is a focal point for faculty and program-driven design and development of creative technology projects that enhance student learning in alignment with the DU IMPACT 2025 strategic plan.

OTL staff are recognized experts in their fields and are happy to consult with you about integrating such technology projects into your teaching.

Web Application Development

The OTL has developed a number of widely-used applications that support teaching and learning at DU. Examples include DU Portfolio, DU CourseMedia, DU Assessment, and more! Inquire with your custom app concepts.

Multimedia Content Creation

OTL staff can help design and develop interactive multimedia objects for instructional use, such as case scenarios, simulations, games, data visualizations, and animated presentations.

Canvas Integration and Reporting

We have experience building applications and services which implement the LTI standard to allow rich integration with the Canvas LMS. We can also provide additional Canvas reporting and stats via the Canvas API and even using Canvas Data alongside visualization software.

Video and Audio Production

We have staff who specialize in recording and producing video and audio content for courses, as well as in support of educational programs.

Graphic and Print Design

OTL can design and produce graphics for both web and print use in support of courses and other educational endeavors.

Technology Consultations

We support technology choices and integration through individual consultations and hands-on workshops led by professional instructors.

Instruction-Related Web Design

OTL staff can architect and design a wide array of web-based content for courses and related programs using the latest in standard Web technologies.
